Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont suiets à révision.

(1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.

(2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.

(3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

(1) Monthly prices are collected and processed three times per annum. The indexes of prior year have a twelve months revision period during the current year. — Des prix mensuels sont relevés et calculés trois fois par année. Les indices de l'année antérieure sont sujets à révision pendant les douze mois de l'année courante.

Note: Indexes subject to revision.
Nota: L'indice est susceptible d'être révisé.

(1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipe-line.

(2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976,* Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueille des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976,* n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P^{Pub.}_{t/71} = P^{New}_{t/Jan.\ 77} \times P^{Old}_{Jan.\ 77/71}$$

where

$P^{Pub}_{t/71}$ is the published index for a period subsequent to January 1977 which has been dervied from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P^{New}_{t/Jan.\ 77}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P^{Old}_{Jan.\ 77/71}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P^{publ.}_{t/71} = P^{nouv.}_{t/janv.\ 77} \times P^{anc.}_{janv.\ 77/71}$$

où

$P^{publ.}_{t/71}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P^{nouv.}_{t/janv.\ 77}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P^{anc.}_{janv.\ 77/71}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada.**

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspayres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

$\sum$ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspayres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

$\sum$ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = index for year t

P_t = price of an item in the given period

P_o = price of an item in year o, the base year

V_o = weight of an item in the base period

P_t/P_o = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$P_{t/o}$ = indice pour l'année t

P_t = prix d'un article particulier pendant une période donnée

P_o = prix d'un article particulier pendant l'année o, année de base

V_o = coefficient de pondération d'un article pendant la période de base

P_t/P_o = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquêté) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinement que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian Industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement form 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes Ensemble des groupes	Weights 100% Pondération 100%	Commodities within each group Produits dans chaque groupe
Vegetable products - substances végétales	12	Fresh fruit, wheat, other grains, oil seeds, rubber, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal products - Animaux et substances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière textiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap, other - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets, autres
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 990-9611

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 990-9611.

NOTE TO USERS OF INDUSTRIAL SELLING PRICE INDEXES

For the first time in this publication we are publishing purchase price indexes for Steel Foundries inputs.

These indices can be found in Table 2, Purchase Price Indexes of Industrial Materials. The indexes are available on a monthly basis from January 1974. For the convenience of our users, the complete history for the Steel Foundry Inputs is as follows:

AVIS AUX UTILISATEURS DES INDICES DES PRIX DE VENTE DANS L'INDUSTRIE

Des indices des prix d'achat des entrées dans les fonderies d'acier sont présentés pour la première fois dans la présente publication.

Ces indices se retrouvent au tableau 2, "Indices des prix d'achat des matériaux industriels". Ils sont disponibles sur une base mensuelle à partir de janvier 1974. Voici, pour le bénéfice de nos utilisateurs, un exposé complet sur les entrées dans les fonderies d'acier:

		Jan. Janv.	Feb. Fév.	March Mars	April Avril	May Mai	June Juin	July Juill.	Aug. Août	Sept.	Oct.	Nov.	Déc.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9615) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by NorthwesTel Inc.)	Zenith 0-8913
Northwest Territories (area served by NorthwesTel Inc.)	Zenith 2-2015

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9615) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Terre-Neuve et Labrador	Zenith 0-7037
Nouvelle-Écosse, Nouveau-Brunswick et Île-du-Prince-Édouard	1-800-565-7192
Québec	1-800-361-2831

NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

®Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

®Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

This publication was prepared under the direction of:

- **Denis J. Desjardins,** Director, Prices Division
- **Constance M. Jones,** Assistant Director
- **Robin Lowe,** Chief, Goods & Services Producing Industries Section

Cette publication a été rédigée sous la direction de:

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.

(2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.

(3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

Note: Indexes for the most recent six months shown are subject to revision.
Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Thermal Coal Index for the most recent twelve months is subject to revision. The index for coal is a purchase price index determined by surveying electric utilities. — L'indice du charbon thermique pour les 12 mois les plus récents est sujet à révision. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité.

(1) Monthly prices are collected and processed three times per annum. The indexes of prior year have a twelve months revision period during the current year. — Des prix mensuels sont relevés et calculés trois fois par année. Les indices de l'année antérieure sont sujets à révision pendant les douze mois de l'année courante.

Note: Indexes subject to revision.
Nota: L'indice est susceptible d'être révisé.

(1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipe-line.

(2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976,* Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueille des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976,* n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P^{Pub.}_{t/71} = P^{New}_{t/Jan.\ 77} \times P^{Old}_{Jan.\ 77/71}$$

where

$P^{Pub}_{t/71}$ is the published index for a period subsequent to January 1977 which has been dervied from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P^{New}_{t/Jan.\ 77}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P^{Old}_{Jan.\ 77/71}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P^{publ.}_{t/71} = P^{nouv.}_{t/janv.\ 77} \times P^{anc.}_{janv.\ 77/71}$$

où

$P^{publ.}_{t/71}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P^{nouv.}_{t/janv.\ 77}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P^{anc.}_{janv.\ 77/71}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada.**

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspayres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

$\sum$ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspayres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

$\sum$ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$Pt/_o$ = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n^o 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$Pt/_o$ = indice pour l'année t

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année o, année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquêté) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinement que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian Industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement form 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes Ensemble des groupes	Weights 100% Pondération 100%	Commodities within each group Produits dans chaque groupe
Vegetable products - substances végétales	12	Fresh fruit, wheat, other grains, oil seeds, rubber, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal products - Animaux et substances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière textiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap, other - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets, autres
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 990-9611

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 990-9611.

Statistics Canada Statistique Canada

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9615) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by NorthwesTel Inc.)	Zenith 0-8913
Northwest Territories (area served by NorthwesTel Inc.)	Zenith 2-2015

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9615) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Terre-Neuve et Labrador	Zenith 0-7037
Nouvelle-Écosse, Nouveau-Brunswick et Île-du-Prince-Édouard	1-800-565-7192
Québec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
Colombie-Britannique (sud et centrale)	112-800-663-1551
Yukon et nord de la C.-B. (territoire desservi par la NorthwesTel Inc.)	Zenith 0-8913
Territoires du Nord-Ouest (territoire desservi par la NorthwesTel Inc.)	Zenith 2-2015

Comment commander les publications

On peut se procurer cette publication et les autres publications de Statistique Canada auprès des agents autorisés et des autres librairies locales, par l'entremise des bureaux locaux de Statistique Canada, ou en écrivant à la Section des ventes et de la distribution des publications, Statistique Canada, Ottawa, K1A 0T6.

Symbols

The following standard symbols are used in Statistics Canada publications.

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

-- amount too small to be expressed.

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

®Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada.

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou zéro.

-- nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTA

Le CANSIM® (Système canadien d'information socio économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

®Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

This publication was prepared under the direction of:

- **Denis J. Desjardins,** Director, Prices Division
- **Constance M. Jones,** Assistant Director
- **Robin Lowe,** Chief, Goods & Services Producing Industries Section

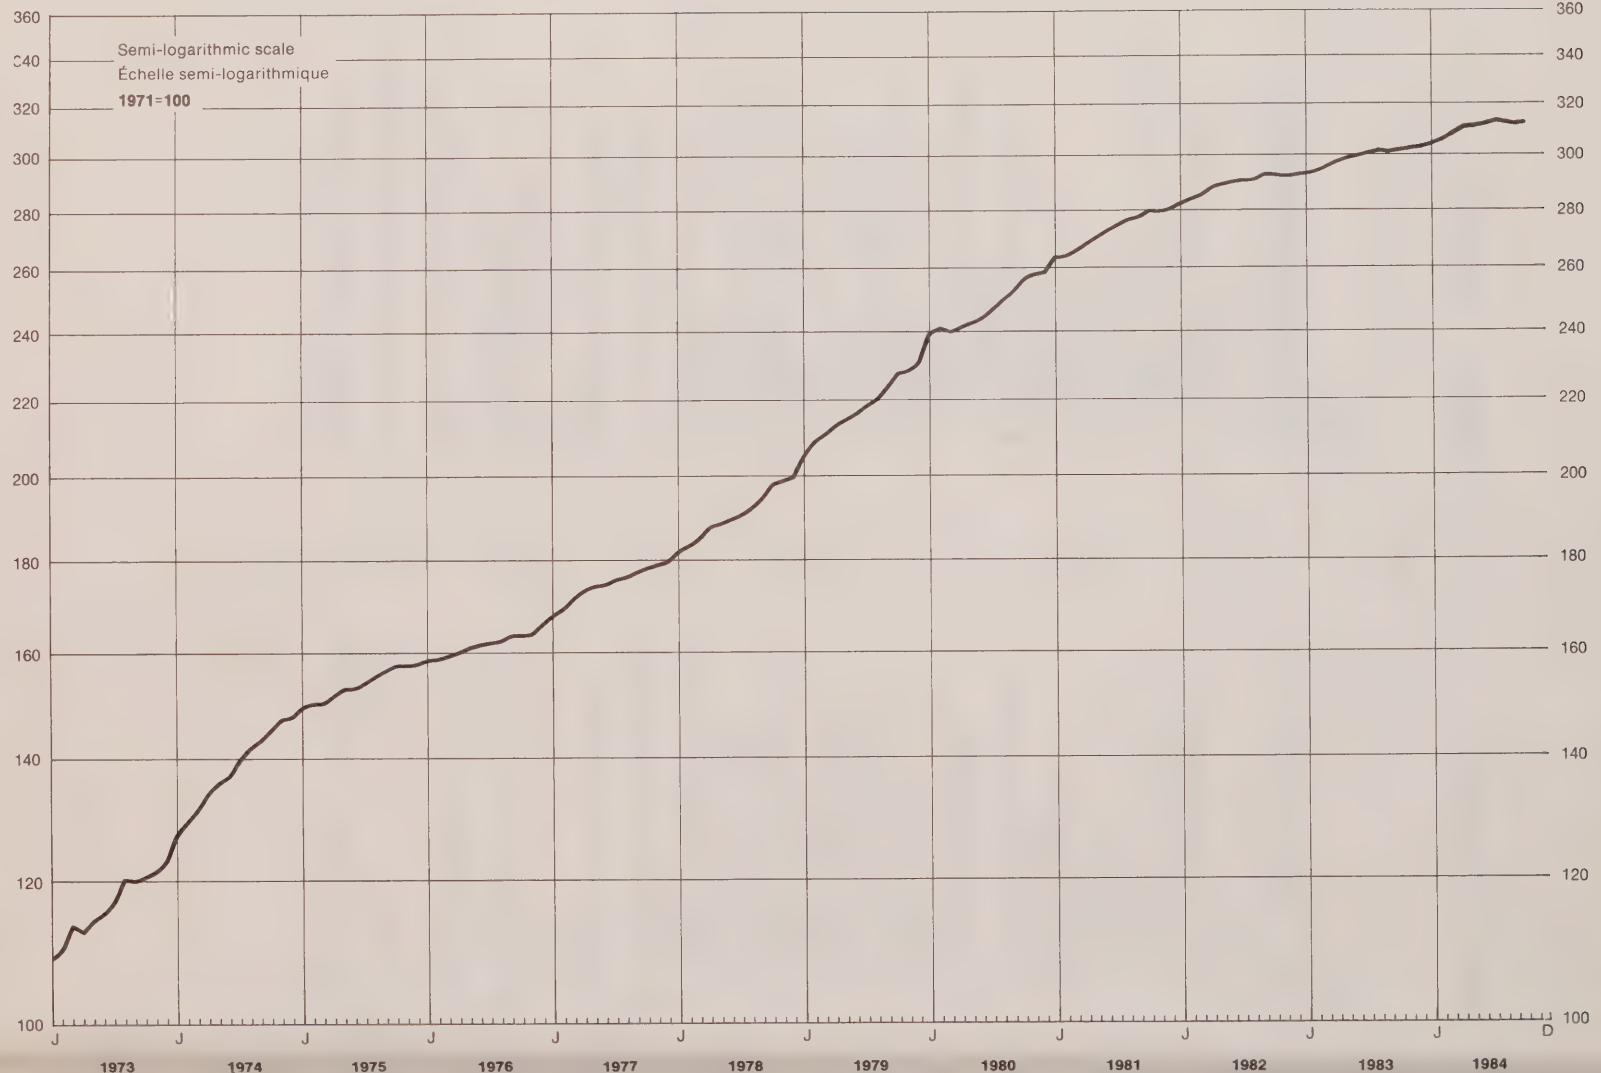
1. Indices des prix de vente dans l'industrie par groupe principal, par industries et par produits (1971 = 100) 2

Groupe principal
1. Industries des aliments et boissons 2
2. Industrie du tabac 17
3. Industrie du caoutchouc et des produits en matière plastique 17
4. Industrie du cuir 20
5. Industrie textile 21
6. Bonneterie 23
7. Industrie de l'habillement 25
8. Industrie du bois 27
9. Industrie du meuble et des articles d'ameublement 31
10. Industrie du papier et activités annexes 33
11. Imprimerie, Édition et activités connexes 38
12. Première transformation des métaux 39
13. Fabrication de produits en métal (sauf machines et équipement de transport) 41
14. Fabrication de machines (sauf électriques) 43
15. Fabrication d'équipement de transport 45
16. Fabrication de produits électriques 48
17. Fabrication de produits minéraux non métalliques 51
18. Fabrication de produits de pétrole et du charbon 54
19. Industrie chimique 55
20. Industries manufacturières diverses 59

2. Indices des prix d'achat des matériaux industriels:

Métaux secondaires (1971 = 100) 62
Entrées d'acier de fonderie (1971 = 100) 63
Indice du charbon thermique 63



3. Indices des prix de vente de l'énergie électrique (non-résidentielle) (1971 = 100) 64

4. Indice des prix des matières brutes (1977 = 100) 66

Explication des méthodes utilisées et sources supplémentaires des prix industriels 67

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.

(2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.

(3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

TABLE 2. Purchase Price Indexes of Industrial Materials

Note: Indexes for the most recent six months shown are subject to revision.
Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.
(1) Thermal Coal Index for the most recent twelve months is subject to revision. The index for coal is a purchase price index determined by surveying electric utilities. — L'indice du charbon thermique pour les 12 mois les plus récents est sujet à révision. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité.

TABLE 3. Electric Power Selling Price Indexes (Non-residential)(1)

TABLEAU 3. Indices des prix de vente de l'énergie électrique (non-résidentielle)(1)

1971 = 100

1) Monthly prices are collected and processed three times per annum. The indexes of prior year have a twelve months revision period during the current year. — Des prix mensuels sont relevés et calculés trois fois par année. Les indices de l'année antérieure sont sujets à révision pendant les douze mois de l'année courante.

Note: Indexes subject to revision.
Nota: L'indice est susceptible d'être révisé.

(1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipe-line.

(2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976,* Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueille des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976,* n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P^{Pub.}_{t/71} = P^{New}_{t/Jan.\ 77} \times P^{Old}_{Jan.\ 77/71}$$

where

$P^{Pub}_{t/71}$ is the published index for a period subsequent to January 1977 which has been dervied from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P^{New}_{t/Jan.\ 77}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P^{Old}_{Jan.\ 77/71}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P^{publ.}_{t/71} = P^{nouv.}_{t/janv.\ 77} \times P^{anc.}_{janv.\ 77/71}$$

où

$P^{publ.}_{t/71}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P^{nouv.}_{t/janv.\ 77}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P^{anc.}_{janv.\ 77/71}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada.**

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspayres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

$\sum$ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspayres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

$\sum$ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$Pt/_o$ = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$Pt/_o$ = indice pour l'année t

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année o, année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquêté) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinement que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian Industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \sum \frac{I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement form 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \sum \frac{I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes Ensemble des groupes	Weights 100% Pondération 100%	Commodities within each group Produits dans chaque groupe
Vegetable products - substances végétales	12	Fresh fruit, wheat, other grains, oil seeds, rubber, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal products - Animaux et substances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière textiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap, other - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets, autres
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 990-9611

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 990-9611.

Statistics Canada Statistique Canada

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9615) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by NorthwesTel Inc.)	Zenith 0-8913
Northwest Territories (area served by NorthwesTel Inc.)	Zenith 2-2015

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9615) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Terre-Neuve et Labrador	Zenith 0-7037
Nouvelle-Écosse, Nouveau-Brunswick et Île-du-Prince-Édouard	1-800-565-7192
Québec	1-800-361-2831

The following standard symbols are used in Statistics Canada publications.

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

-- amount too small to be expressed.

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

®Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada.

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou zéro.

-- nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

®Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

This publication was prepared under the direction of:

- **Denis J. Desjardins,** Director, Prices Division
- **Constance M. Jones,** Assistant Director
- **Robin Lowe,** Chief, Goods & Services Producing Industries Section

Cette publication a été rédigée sous la direction de:

Raw Materials Price Index
Indice des prix des matières brutes

Percentage Change in the Raw Materials Price Index
Variation en pourcentage de l'indice des prix des matières brutes

TEXT TABLE III. Raw Materials Price Index (1977 = 100)

TABLEAU EXPLICATIF III. Indice des prix des matières brutes (1977 = 100)

	Index / Indice			Percentage change / Variation proportionnelle		Contribution to percentage change(1) / Contribution à la variation en pourcentage(1)		Relative importance of group 1977 / Importance relative du groupe 1977
	Nov. 1984(2)	Oct. 1984(2)	Nov. 1983	Nov. 1984 / Oct. 1984	Nov. 1984 / 1983	Nov. 1984 / Oct. 1984	Nov. 1984 / 1983	
	Nov. 1984(2)	Oct. 1984(2)	Nov 1983	Nov. 1984 / Oct. 1984	Nov. 1984 / 1983	Nov. 1984 / Oct. 1984	Nov. 1984 / 1983	
Raw Materials - Total - Ensemble des matières brutes	221 4	212.6	210 8	4 1	5.0	4 14	5 0	100.0
Vegetable Products - Substances végétales	124.2	125.6	138.0	- 1.1	- 10.0	- 0.08	- 0.8	12
Animals and Animal Products - Animaux et substances animales	171.0	168.0	155.0	1.8	10.3	0.33	1.8	23
Textile - Matières textiles	149.8	150.9	148.1	- 0.7	1.1	-	-	1
Wood - Bois	149.4	149.4	144.8	-	3.2	-	0.2	11
Ferrous Materials - Matières ferreuses	150.1	150.4	141.6	- 0.2	6.0	-	0.1	3
Non-ferrous Metals - Métaux non ferreux	160.1	157.1	176.7	1.9	- 9.4	0.08	- 0.5	6
Non-Metallic Minerals - Minéraux non métalliques	191.0	190.8	183.6	0.1	4.0	-	0.1	4
Coal, Crude Oil, Natural Gas - Charbon, pétrole brut, gaz naturel	321.9	301.4	300.2	6.8	7.2	3.79	4.1	40
Raw Materials Excluding Coals, Crude Oil, Natural Gas Total - Ensemble des matières sans charbon pétrole brut, gaz naturel	156.2	155.1	152.8	0.7	2.2	0.31	-	60

1) This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes.
1) Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient inchangés.
2) These indexes are preliminary.
2) Ces indices sont provisoires.

TEXT TABLE IV. Raw Materials Price Index (1977 = 100)

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter industrielles. L'explication des méthodes est donnée à la suite du tableau 4.

(2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.

(3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

Note: Indexes for the most recent six months shown are subject to revision.
Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Thermal Coal Index for the most recent twelve months is subject to revision. The index for coal is a purchase price index determined by surveying electric utilities. — L'indice du charbon thermique pour les 12 mois les plus récents est sujet à révision. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité.

(1) Monthly prices are collected and processed three times per annum. The indexes of prior year have a twelve months revision period during the current year. — Des prix mensuels sont relevés et calculés trois fois par année. Les indices de l'année antérieure sont sujets à révision pendant les douze mois de l'année courante.

TABLE 4. Raw Materials Price Index

TABLEAU 4. Indice des prix des matières brutes

1977 = 100

Note: Indexes subject to revision.
Nota: L'indice est susceptible d'être révisé.

(1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipe-line.

(2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976,* Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueille des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976,* n^{o} 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P^{Pub.}_{t/71} = P^{New}_{t/Jan.\ 77} \times P^{Old}_{Jan.\ 77/71}$$

where

$P^{Pub}_{t/71}$ is the published index for a period subsequent to January 1977 which has been dervied from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P^{New}_{t/Jan.\ 77}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P^{Old}_{Jan.\ 77/71}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P^{publ.}_{t/71} = P^{nouv.}_{t/janv.\ 77} \times P^{anc.}_{janv.\ 77/71}$$

où

$P^{publ.}_{t/71}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P^{nouv.}_{t/janv.\ 77}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P^{anc.}_{janv.\ 77/71}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada.**

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspayres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

$\sum$ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspayres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

$\sum$ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$Pt/_o$ = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n^{o} 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$Pt/_o$ = indice pour l'année t

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année o, année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquêté) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinement que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian Industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron, and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement form 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes Ensemble des groupes	Weights 100% Pondération 100%	Commodities within each group Produits dans chaque groupe
Vegetable products - substances végétales	12	Fresh fruit, wheat, other grains, oil seeds, rubber, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal products - Animaux et substances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière textiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap, other - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets, autres
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 990-9611

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 990-9611.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9615) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9615) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

MONTHLY
INDUSTRY PRICE INDEXES

NOTE TO USERS: MAJOR REVISION

One year from now, in January 1986, we will be introducing in this publication some new sets of price indexes which will replace the ones we publish now. In line with Statistics Canada policy regarding time and weight base revisions, 1981 will become the new time and weight reference base. The new series will be on different matrixes in CANSIM, and will have different Databank numbers. The existing series, on 1971 and 1977 time bases, will be terminated with the publication of the December 1985 indexes.

Nature of the new series:

Table 1. Industry Selling Price Indexes

A major change will occur in this set of indexes which cover the outputs of Canadian manufacturing. The main library of indexes will be commodity based; there will be 800 to 900 of these, from which various other indexes can be calculated.

Two major sets of aggregations will be produced. The first set will group similar commodities together and aggregative indexes will be calculated for them. Also, indexes will be calculated for the outputs of individual industries, and major groups (as classified in the 1980 S.I.C.). These two sets of indexes will provide continuity with the existing indexes in the I.S.P.I. that are largely used for contract escalation or industry analysis.

Work is also underway to devise indexes which estimate price change at various levels of processing and distribution in the Canadian economy. Statistics Canada is also open to suggestions concerning the compilation of indexes of particular analytical interest, or which describe the impact of price change on specific economic sectors. Potential users of such series are invited to contact Statistics Canada. A list of the library of indexes from which such series could be derived is available on request.

INDICES DES PRIX DE L'INDUSTRIE

AVIS AUX UTILISATEURS: RÉVISION IMPORTANTE

Dans un an, soit en janvier 1986, nous publierons dans le présent bulletin certaines nouvelles séries d'indices de prix qui remplaceront celles qui paraissent actuellement. La nouvelle base de référence et de pondération sera 1981, conformément à la politique de Statistique Canada régissant les révisions de cette nature. Les nouvelles séries seront stockées dans des matrices différences du CANSIM et auront de nouveaux numéros Databank. Les séries actuelles, sur les bases 1971 et 1977, prendont fin avec la publication des indices de décembre 1985.

Nature des nouvelles séries

Tableau 1. Indices des prix de vente dans l'industrie

Un changement important sera apporté à cette série d'indices qui porte sur les sorties des fabricants canadiens. La bibliothèque principale sera fondée sur les produits; elle comptera entre 800 et 900 indices qui permettront de calculer divers autres indices.

Deux grandes séries d'agrégats seront produits. La première regroupera des produits analogues pour lesquels des indices agrégatifs seront calculés. De même, des indices des prix des sorties seront calculés pour différentes industries et par grand groupe (de la CTI de 1980). Ces deux séries d'indices assureront une continuité avec les indices actuels de l'IPVI qui servent beaucoup pour l'établissement de clauses d'indexation ou pour l'analyse industrielle.

D'autres travaux sont en cours pour concevoir des indices permettant d'estimer le changement de prix à différents niveaux de la transformation et de la distribution au Canada. Statistique Canada est également prêt à recevoir des suggestions en vue du rassemblement d'indices qui seraient particulièrement utiles pour l'analyse ou qui permettraient de décrire les conséquences du changement de prix dans certains secteurs économiques. Les utilisateurs éventuels de telles séries sont invités à communiquer avec Statistique Canada. On peut obtenir sur demande la liste des indices à partir desquels il serait possible de dériver ces séries.

Table 2: Purchase Price Indexes of Industrial Materials

The indexes for scrap will be shown as component indexes in the revised Raw Materials Price Index. There will be some reduction in the commodity detail. The Thermal Coal Index will also be shown as a part of the RMPI. All these indexes will continue to be calculated in the same manner except that 1981 weights will be incorporated.

Table 3: Electric Power Selling Price Indexes (Non-residential)

These indexes will continue to be published in their present form, but updated to a 1981 time and weight reference base.

Table 4: Raw Materials Price Index

The Raw Materials Price Index will continue to show the same major components, except for Textiles, and will be expanded to show additional commodity detail within each component. The commodities which make up the Textiles component will be assigned to their places in animal or vegetable products or in the ISPI.

Guide to users of existing indexes

When published, the new series will provide, in many cases, an alternative index measure from 1981 to 1985. The selection of the time period at which to switch from the existing to the new series is a choice of the user. We do anticipate, however, that a large number of users of these series, particularly if the use is in some contractual arrangement, will wish to substitute the new series as of December 1985 if they use monthly data, or the annual average for 1985 if they use annual figures. For that reason, Prices Division will attempt to identify the nearest equivalent index, and will publish Databank numbers and link factors to enable users to switch from the existing to the new series easily. Tables of "nearest equivalent" Databank numbers will be inserted with the September 1985 publication, and link factors will be available with the publication of the December 1985 indexes.

Because of the large number of series presently published that could be subject to linking to a new series, only those of known major importance will be matched and linked as a matter of course. The plans for linking the various indexes are listed in the table at the end of this note.

Tableau 2: Indices des prix d'achat des matériaux industriels

Les indices pour les déchets de métaux seront des composantes du nouvel indice des prix des matières brutes. Les données par produit seront un peu moins détaillées. L'indice du charbon thermique fera également partie de l'IPMB. Tous ces indices continueront d'être calculés de la même façon, sauf que des coefficients de pondération de 1981 seront utilisés.

Tableau 3: Indices des prix de vente de l'énergie électrique (non-résidentielle)

Ces indices continueront de paraître dans leur forme présente, quoique sur la nouvelle base de référence et de pondération de 1981.

Tableau 4: Indices des prix des matières brutes

L'indice des prix des matières brutes gardera les mêmes composantes, à l'exception des matières textiles, et des données plus détaillées par produit seront présentées pour chaque composante. Les produits constituant la composante des matières textiles figureront à leur place dans la composante des substances animales ou dans celles des substances végétales, ou encore dans l'IPVI.

Guide des utilisateurs des indices actuels

Lorsqu'elles paraîtront, les nouvelles séries comprendront dans bien des cas un indice de remplacement de 1981 à 1985. C'est aux utilisateurs qu'il incombe de choisir le moment pour passer des séries actuelles aux nouvelles séries. Nous prévoyons toutefois qu'un grand nombre d'utilisateurs de ces séries, notamment ceux qui s'en servent dans des clauses contractuelles, souhaiteront adopter les nouvelles séries en décembre 1985 s'ils utilisent les données mensuelles, ou la moyenne annuelle pour 1985 s'ils utilisent les chiffres annuels. C'est pourquoi la Division des prix essaiera d'indiquer l'indice équivalent le plus proche et publiera des numéros Databank et des facteurs de raccordement pour permettre aux utilisateurs de passer aisément des séries actuelles aux nouvelles séries. Des tableaux indiquant les numéros Databank des séries équivalentes les plus proches paraîtront dans le numéro de septembre 1985 de la publication et des facteurs de raccordement seront disponibles avec la publication des indices de décembre 1985.

Étant donné le grand nombre de séries actuellement publiées pouvant être raccordées à une nouvelle série, seules les plus importantes seront appareillées et raccordées automatiquement. Le tableau à la fin de la présente note précise les mesures qui seront prises pour le raccordement des différents indices.

Users of any other series are asked to contact Prices Division so that we may provide assistance. Users are also advised to review the new indexes when they are published and to re-evaluate whether they are using the most appropriate index for their purpose. It may be that there is a more suitable one among the new range of indexes available.

The link factor is a number based on the relationship between indexes on the two different bases at a certain point in time. If the relevant index on the new base is multiplied by the link factor a continuous series on the former base is obtained which provides the same percentage movement as the new series from that time forward.

For further information

We will keep users abreast of developments through inserts to this publication and in notes in CANSIM where possible. If you require further information, or wish to discuss the topics described above please write or phone Robin Lowe, Chief, Goods and Service Industries Section, Prices Division, Statistics Canada, Ottawa K1A 0T6, (tel 613) 990-9611).

Ceux qui utilisent d'autres séries sont priés de communiquer avec la Division des prix qui pourra leur venir en aide. Les utilisateurs auraient également avantage à étudier les nouveaux indices dès leur parution et s'assurer qu'ils utilisent vraiment l'indice le mieux adapté à leurs besoins. Il est possible en effet qu'un meilleur indice fasse partie des nouvelles séries.

Le facteur de raccordement est un nombre fondé sur le rapport existant, à un moment donné, entre des indices ayant deux bases distinctes. Si on multiplie l'indice sur la nouvelle base par le facteur de raccordement, on obtient une série continue sur l'ancienne base indiquant le même mouvement en pourcentage que la nouvelle série à partir de ce moment-là.

Pour plus de renseignements

Nous tiendrons les utilisateurs au courant des faits nouveaux par le truchement d'encarts dans la présente publication et de notes dans le CANSIM, dans la mesure du possible. Si vous avez besoin de plus de renseignements ou si vous désirez discuter de ce qui précède, veuillez écrire ou téléphoner à Robin Lowe, chef, Section des industries de biens et de services, Division des prix, Statistique Canada, Ottawa K1A 0T6 (tél. (613) 990-9611).

Table: Equivalent indexes in 1986 to currently published indexes
Tableau: Indices équivalents en 1986 aux indices publiés actuellement

Current Index Series - Séries courantes	Nearest Equivalent Index on 81 base - Indice équivalent le plus proche sur la base de 1981	Will Link Factor be calculated? - Un facteur de raccordement sera-t-il calculé?
1. I.S.P.I. (1971) Total - IPVI (1971) Total	Either total commodities or total industries - Ensemble des produits produits ou ensemble des industries	Yes - Oui
Major Group or Industry Indexes - Indices par groupe principal ou par industrie	Industry and Major Group Indexes on 1980 S.I.C.- Indices par industrie et par grand groupe de la CTI de 1980	Yes - Oui
Commodity series with published history prior to 1971* - Séries de produits avec données rétrospectives publiées antérieures à 1971*	Commodity indexes (sometimes some detail will be lost) - Indices de produits (avec parfois certains détails en moins)	Yes - Oui
Commodity series with "700" in the series identifier - Séries de produits dont l'identificateur de série comporte les chiffres "700"	Commodity indexes - Indices de produits	Yes - Oui
Other commodity series - Autres séries de produits	Commodity indexes, usually with loss of some detail - Indices de produits, avec le plus souvent certains détails en moins	On request - Sur demande
2. Purchase Price Indexes (1971=100) - Indices des prix d'achat (1971=100)		
: Aggregations by metal (eg. Zinc metal scrap group) - : Agrégats par métal (par ex., groupe des déchets de zinc)	Commodity indexes within Raw Material Price Index - Indices de produits compris dans l'indice des prix des matières brutes	Yes - Oui
: Other metal indexes - : Autres indices de métaux	Detail will be lost, use appropriate metal scrap group - Des détails seront perdus; utiliser le groupe approprié de déchets de métaux	On request - Sur demande
: Thermal coal - : Charbon thermiques	Same index - Même indice	Yes - Oui
3. Electricity Selling Price Indexes (1971=100) - Indices des prix de vente de l'énergie électrique (1971=100)	Same indexes - Mêmes indices	Yes - Oui
4. Raw Materials Price Index (1977=100) - Indices des prix des matières brutes (1977=100)		
: Totals, and all components except Textiles - : Totaux, et toutes les composantes sauf les matières textiles	Same indexes - Mêmes indices	Yes - Oui
: Textiles - : Matières textiles	Separate commodity series in R.M.P.I or in I.S.P.I. successor - Séries de produits distinctes incluses dans les séries remplacantes de l'IPMB ou de l'IPV	On request

* Check July 1984 issue of 62-011 to identify these series - * Voir le numéro de Juillet 1984 du bulletin 62-011 pour connaître ces séries

NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 990-8200.

®Registered Trade Mark of Statistics Canada.

Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613) 990-8200.

®Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

REVIEW OF INDUSTRY SELLING PRICE INDEX CHANGES IN 1984(1)

Overview

In general, the Industry Selling Price Index (ISPI) for manufacturing exhibited in 1984 the same pattern of moderate growth as in 1983. The annual rates of change varied between 3.5% and 4.6% throughout the year, compared with a range of between 3.0% and 4.0% in 1983. From a broader historical perspective, however, this moderate growth seems to have halted, at least temporarily, the downward trend that had prevailed in the ISPI since the beginning of 1980.

Nevertheless, this slight upturn in the ISPI does not signal the return of internally generated inflation. The main domestic determinants of inflation in Canada - final domestic demand, unit labour costs and capacity utilization rates - remained at levels unlikely to increase inflationary pressures.

As a result, in December 1984 most manufacturing industries that face little or no international competition had annual rates of increase that were virtually unchanged from those recorded in December 1983.

The firming of the ISPI in 1984 was largely due to price movements in manufacturing industries exposed to international competition and consequently to forces primarily associated with the international economic situation. Heading the list of these forces was the decline of almost 5 cents in the value of the Canadian dollar relative to its U.S. counterpart in 1984. Any depreciation in the Canadian dollar automatically increases the Canadian-dollar value (measured by the ISPI) of goods priced in U.S. dollars. The 1984 depreciation had the greatest effect on the price indexes of the wood, primary metals and paper and allied industries.

Sharp fluctuations in various international commodity prices set on world markets also had a significant impact on the movement of some industry price indexes, especially primary metals. Another factor was the soaring value of the U.S. dollar on international exchange markets, which caused

COMPTE-RENDU DES VARIATIONS DES INDICES DES PRIX DE VENTE DANS L'INDUSTRIE EN 1984(1)

Analyse globale

De façon générale, l'évolution de l'indice des prix de vente dans l'industrie (IPVI) manufacturière en 1984 se caractérise par une poursuite du rythme modéré d'accroissement observé en 1983. A preuve, les taux de variation annuels se sont maintenus entre 3.5% et 4.6% tout au long de 1984, comparativement à des changements annuels se situant entre 3.0% et 4.0% en 1983. En se plaçant dans une perspective historique plus large, ce rythme modéré d'accroissement semble toutefois mettre un terme, du moins temporairement, à la baisse tendancielle de l'IPVI observée depuis le début de 1980.

Cette légère remontée de l'IPVI en 1984 ne témoigne cependant pas d'une reprise de l'inflation de source domestique au Canada. En effet, les principaux déterminants intérieurs de l'inflation au Canada, soit la demande domestique finale, les coûts unitaires de main-d'oeuvre et les taux d'utilisation de la capacité installée, se sont maintenus en 1984 à des niveaux peu susceptibles d'accroître les pressions inflationnistes.

En conséquence, la plupart des industries manufacturières peu ou pas soumises à la concurrence internationale ont montré en décembre 1984 des taux de variation annuels ne différant guère de ceux observés en décembre 1983.

En fait, le raffermissement de l'IPVI en 1984 tient davantage à l'évolution des prix dans les secteurs manufacturiers exposés à la concurrence étrangère et, par voie de conséquence, à des facteurs d'abord liés à la conjoncture économique internationale. En tête de liste figure la baisse de près de 5 cents de la valeur du dollar canadien par rapport à la devise américaine en 1984. À l'intérieur de l'IPVI, toute baisse du dollar canadien a pour effet d'accroître automatiquement la valeur en dollars canadiens des biens libellés en dollars américains. Les indices de prix les plus touchés par ce phénomène furent ceux des industries du papier et activités connexes, du bois et de la première transformation des métaux.

Outre cette dévaluation appréciable du dollar canadien, les fortes fluctuations qu'ont subit les prix de plusieurs produits de base déterminés sur les marchés mondiaux ont également affecté de façon significative l'évolution des indices de prix de certaines industries, tout particulièrement celle de la première transformation des

(1) Toutes les données incorporent les révisions apportées jusqu'en décembre 1984. Les indices et les variations en pourcentage s'appliquant aux six derniers mois sont sujets à révision.

a substantial drop in the prices of precious metals, chiefly gold.

Finally, some manufacturing industries experienced considerable variation in external demand for their products in 1984. These fluctuations affecting export markets had some influence on price movements, particularly in the wood industry and to a lesser extent in the paper and allied industries.

The impact of these major external determinants of industry price movements in Canada varied not only in amplitude but also in direction over the course of the year. In general, their influences were convergent in the first four months of 1984 and divergent thereafter. It is largely for this reason that the upswing in the ISPI was particularly evident early in the year. The ISPI's annual rate of increase peaked at 4.6% in March, then fell gradually to a low of 3.5% in October, and closed the year at 3.6%.

métaux. À cela s'ajoute l'ascension vertigineuse du dollar américain sur les marchés de change mondiaux, qui a eu comme conséquence de faire chuter de façon appréciable les prix des métaux précieux, dont ceux de l'or principalement.

Enfin, certains secteurs manufacturiers ont vu la demande extérieure pour leurs produits fluctuée de façon importante en 1984. Ces variations affectant les marchés d'exportation ont exercé un certain impact sur l'évolution des prix particulièrement dans l'industrie du bois et, dans une moindre mesure, dans l'industrie du papier et activités connexes.

L'impact de ces principaux déterminants extérieurs de l'évolution des prix industriels au Canada a cependant varié en amplitude bien entendu, mais également en direction tout au long de 1984. De façon générale, on retiendra que leurs influences furent convergentes au cours des quatres premiers mois de l'année, et divergentes par la suite. C'est ce qui explique en bonne partie que la reprise de l'IPVI en 1984 se soit particulièrement fait sentir en début d'année. Plus spécifiquement, le taux de variation annuelle de l'IPVI atteignait d'abord un sommet de 4.6% en mars 1984 pour par la suite se replier graduellement et atteindre un creux de 3.5% en octobre, avant finalement de s'établir à 3.6% en décembre.

Analysis by Sector - Selected Major Groups(2)

We will begin by discussing the movements of price indexes for exposed sectors of the Canadian manufacturing industry.

The annual rate of change in the **wood industries** index plummeted from 5.5% in December 1983 to -1.9% in December 1984. The 2.2% decline in the value of the Canadian dollar in March 1984, coupled with the recovery of residential construction in the United States in the first quarter of the year, pushed the wood industries index up to a peak of 6.0% in March. Subsequently, however, the positive effect of the Canadian dollar's depreciation was offset both by an unexpected rise in mortgage rates, which caused a significant decrease in housing starts in Canada, and by a downturn in export markets.

The most important movement at the individual industry level of the wood industries group was a 3.3% drop in the sawmills and planing mills index. In particular, cedar

(2) Unless otherwise stated, price movements are expressed in terms of percentage change from December 1983 to December 1984.

Analyse sectorielle - Certains groupes principaux(2)

Considérons tout d'abord les variations des indices des prix industriels dans certains secteurs exposés de l'industrie manufacturière canadienne.

Le mouvement annuel de l'indice des **industries du bois** s'est fortement replié en 1984, passant de 5.5% en décembre 1983 à -1.9% en décembre 1984. La baisse de 2.2% de la valeur du dollar canadien en mars 1984 combinée à la relance de la construction domiciliaire aux États-Unis au premier trimestre 1984 avaient d'abord permis à l'indice des industries du bois d'atteindre un sommet de 6.0% au mois de mars. À partir du mois d'avril, l'effet positif de la baisse du dollar canadien fut toutefois contrebalancé à la fois par la hausse inattandue des taux hypothécaires, qui entraîna une diminution appréciable du nombre de mises en chantier au Canada, et par un certain recul observé sur les marchés d'exportation.

Au niveau des industries constituant le groupe principal des industries du bois, on retiendra principalement la baisse de 3.3% des indices des scieries et ateliers de rabotage. En particulier,

(2) Sauf indications contraires, le changement en pourcentage de décembre 1983 à décembre 1984 constituera la mesure utilisée pour décrire les mouvements de prix.

and hemlock prices fell 19.7% and 3.5% respectively in 1984. The shingle mills index also plunged 21.6% in 1984, while the index for the sash and door and other millwork industry, which encounters much less foreign competition, was up 4.0%.

The **paper and allied industries** index posted the largest increase of any major group in 1984, 11.4%. By contrast, the same index closed the previous year up only 2.9%. Firm export markets, particularly in the second half of 1984, and the decline of the Canadian dollar were mainly responsible for the strong advance. The lockout from February 2 to April 10 at British Columbia pulp and paper mills, which significantly depleted inventories of the various types of wood pulp, also contributed to the increase, though to a lesser extent.

The pulp and paper mills index was the key factor in the movement of the group index, rising 13.7% in 1984. Most of this increase was due to higher prices for newsprint (13.0%) and the various types of sulphate and soda wood pulp (21.3% on average).

The **primary metals** index sustained a 3.2% decline between December 1983 and December 1984, compared with a 5.5% rise in the preceding 12-month period. The slump in primary metals prices on world markets throughout 1984 (except in February and March) played a major role in the decline of the group index. But for the positive effect that the depreciation of the Canadian dollar had on prices in this sector, the downturn would have been even more pronounced.

The smelting and refining index largely controlled the movement of the primary metals group index in 1984. The former plunged 10.3%, after posting a 9.3% increase in 1983. Precious metals prices in particular dropped 13.2% between December 1983 and December 1984, and zinc and copper prices were down 1.1% and 2.4% respectively. Also worth noting was a 2.3% rise in the iron and steel mills index, although its contribution to the movement of the group index was smaller.

We shall now examine changes in the price indexes for some sheltered sectors of the Canadian manufacturing industry.

les prix pour le cèdre et la pruche ont respectivement chuté de 19.7% et 3.5% en 1984. Mentionnons également que les indices des usines de bardeaux ont enregistré une baisse de 21.6% en 1984, tandis que ceux de la fabrication de portes, châssis et autres bois ouvrés, beaucoup moins soumis à la concurrence étrangère, gagnaient 4.0%.

L'accroissement de 11.4% de l'indice des **industries du papier et activités connexes** a été le plus élevé parmi l'ensemble des groupes principaux en 1984. Comparativement, cet indice clôturait en hausse de 2.9% en 1983. Des marchés d'exportations fermes, particulièrement dans la seconde moitié de l'année 1984, et la baisse du dollar canadien furent dans une large part responsable de cette forte progression. Le lockout qui a sévit du 2 février au 10 avril dans les usines de pâtes et papiers en Colombie-Britannique, en réduisant de façon significative les inventaires des différents types de pâtes de bois, a également contribué, quoique dans une moindre mesure, à la progression de l'indice du groupe.

L'indice des usines de pâtes et papiers a enregistré la plus forte contribution au mouvement de l'indice du groupe, gagnant 13.7% en 1984. Les augmentations de prix pour le papier journal (13.0%) et les différents types de pâte de bois au sulphate et à la soude (21.3% en moyenne) furent les plus déterminantes.

L'indice **des industries de la première transformation des métaux** a enregistré une baisse de 3.2% entre décembre 1983 et décembre 1984, alors qu'il gagnait 5.5% entre décembre 1982 et décembre 1983. Le repli des prix des métaux de première transformation sur les marchés mondiaux durant la majeure partie de 1984, à l'exception des mois de février et mars, a contribué de façon significative au recul de l'indice du groupe. N'eut été l'impact positif de la baisse du dollar canadien sur les prix de ce secteur, le recul aurait été encore plus prononcé.

L'activité du secteur de la fonte et affinage a largement dominé en 1984 l'évolution de l'indice du groupe de la première transformation des métaux. Plus précisément, les indices de la fonte et affinage ont chuté de 10.8% en 1984, comparativement à une hausse de 9.3% en 1983. Les prix des métaux précieux en particulier diminuaient de 13.2% entre décembre 1983 et décembre 1984, alors que les prix du zinc et du cuivre accusaient des baisses respectives de 1.1% et 2.4%. Bien que sa contribution au mouvement de l'indice du groupe fut de moindre importance, la hausse de 2.3% des indices de la sidérurgie est également à souligner.

Considérons maintenant les variations des indices de prix industriels dans certains secteurs abrités de l'industrie manufacturière canadienne.

The **petroleum and coal products** index posted an annual rate of increase of 7.5% in 1984, compared with 2.5% in 1983. After a substantial jump in January (2.5%), the group index suffered four consecutive declines. The price war waged by the oil companies undoubtedly was a factor in this slide. In June the trend reversed and remained upward through the end of the year. The largest advance occurred in November (3.1%) as a result of the increase in the Petroleum Compensation Charge that went into effect on November 10.

The **metal fabricating** index gained 4.2% in 1984, compared with 2.9% the previous year. All the industries in this group registered increases in 1984. The main contributors to the index's movement were the metal stamping and pressing industry (3.7%), wire and wire products manufacturers (5.2%) and hardware, tool and cutlery manufacturers (6.3%).

The **food and beverage** index rose 4.4% in 1984, compared with 4.7% in 1983. Three industries were responsible for much of the group index's advance. First, the slaughtering and meat processors index was up 7.0% in 1984. This increase was due primarily to higher prices for beef (6.9%) and pork (11.1%). In addition, lard and shortening prices jumped 25.0% and 19.9% respectively.

The dairy products industry, up 7.1% in 1984, also contributed to the movement of the food and beverage index. Higher prices for milk (8.7%) and other dairy products (butter, cheese, ice cream and so on) were largely attributable to increases in industrial milk prices as set by the Canadian Dairy Commission in January, April and August. Finally, a 10.5% surge in the miscellaneous food processors index was also a factor. The prices of roasted coffee, margarine and tea rose 12.9%, 16.4% and 38.4% respectively.

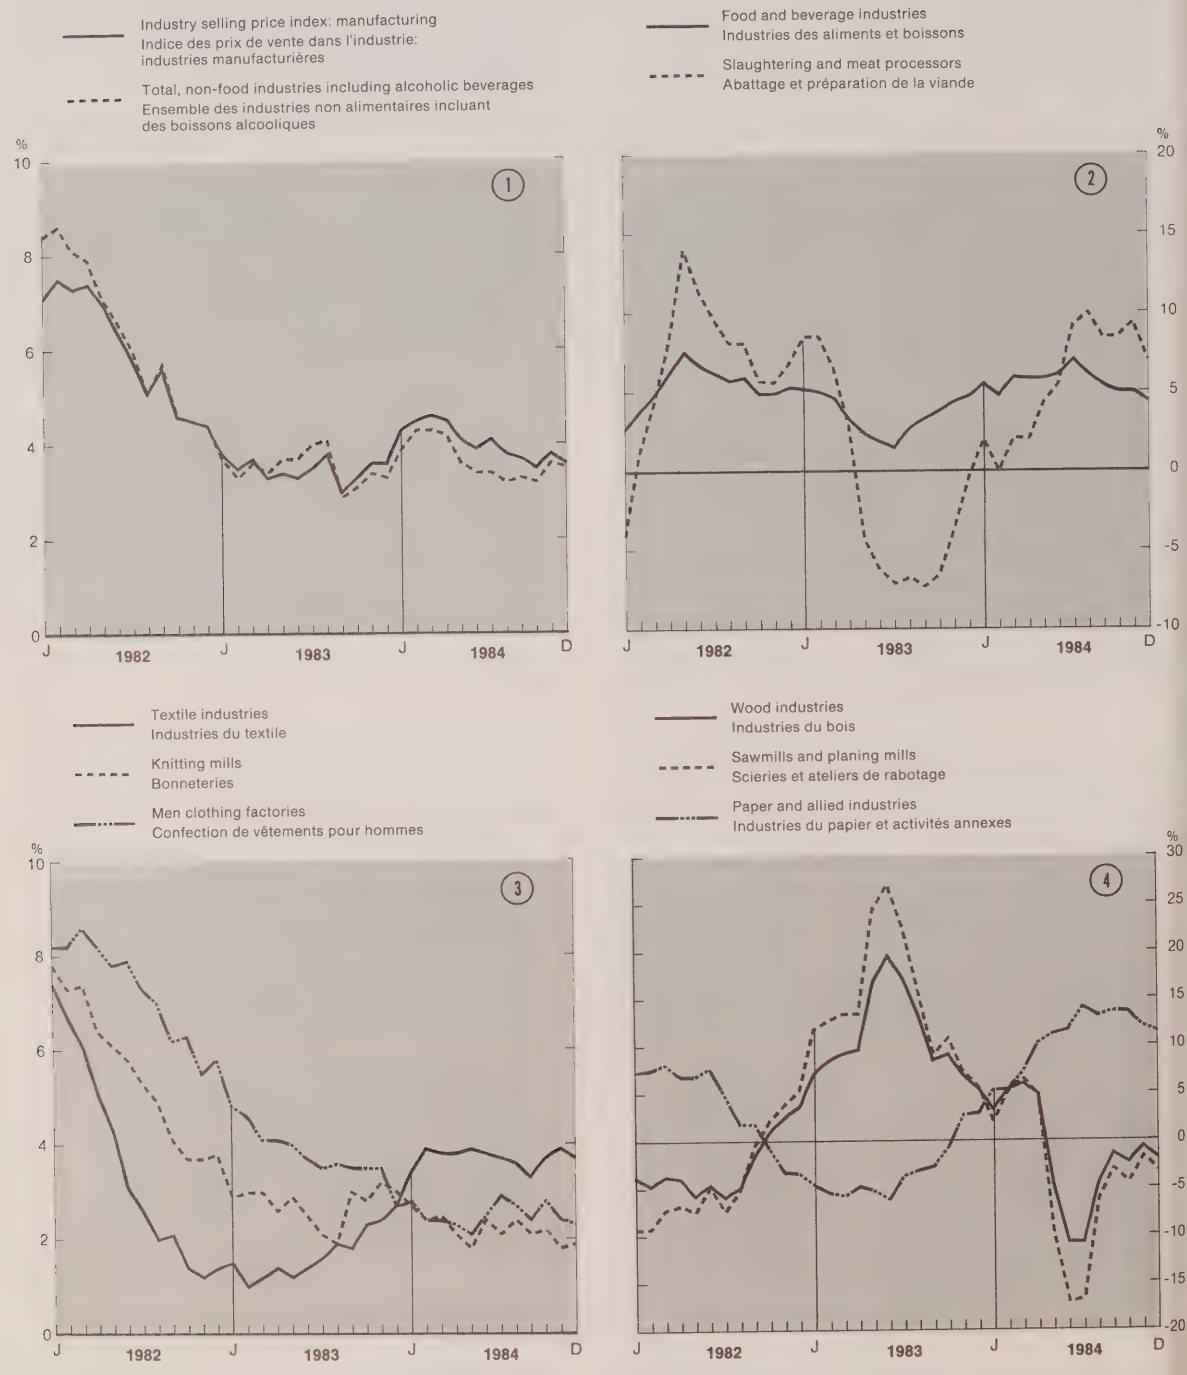
On the other hand, price movements in some industries in the food and beverage group had a moderating effect on the group index. In particular, the feed industry index posted a 7.9% drop in 1984, compared with a 17.1% jump in 1983. In addition, the cane and beet sugar processors index was down 14.1%, chiefly as a result of lower prices for refined sugar.

L'indice **des produits du pétrole et du charbon** a progressé de 7.5% en 1984, comparativement à un taux annuel d'accroissement de 2.5% enregistré en décembre 1983. Après une hausse appréciable au mois de janvier (2.5%), l'indice du groupe accusa quatre baisses consécutives. La guerre des prix que se livra les entreprises pétrolières joua certes un rôle dans ce recul de l'indice du groupe. En juin, la tendance se renversa pour se prolonger jusqu'en fin d'année. L'augmentation la plus importante eut lieu en novembre (3.1%), suite au relèvement des frais d'indemnisation pétrolière décrété le 10 novembre.

L'indice des **industries de la fabrication de produits en métal** a gagné 4.2% en 1984 contre 2.9% en 1983. L'ensemble des industries formant ce groupe principal ont affiché des hausses en 1984. Parmi celles qui contribuèrent le plus au mouvement de l'indice du groupe, on retrouve les industries de l'emboutissage et du matricage des métaux (3.7%), du fil métallique et de ses produits (5.2%) et celle des fabricants de quincaillerie, d'outillage et de coutellerie (6.3%).

Finalement, l'indice des **industries des aliments et boissons** a progressé de 4.4% en 1984, comparativement à une hausse de 4.7% en 1983. Trois industries de ce groupe principal ont particulièrement contribué à la progression de l'indice du groupe. Tout d'abord, l'indice de l'abattage et de la préparation de la viande gagnait 7.0% en décembre 1984. Les principaux responsables de cet accroissement furent les hausses des prix du boeuf (6.9%) et du porc (11.1%). Soulignons également les augmentations de prix de 25.0% et 19.9% respectivement pour le saindoux et la graisse préparée.

Les industries laitières, en hausse de 7.1% en 1984, contribuèrent également au mouvement de l'indice du groupe principal des aliments et boissons. Les hausses des prix du lait (8.7%) et des différents produits laitiers (beurre, fromage, crème glacée, etc.) découlèrent en bonne partie des hausses du prix du lait de transformation décrétées par la Commission canadienne du lait en janvier, en avril et en août. Enfin, la hausse de 10.5% de l'indice des industries alimentaires diverses fut également déterminante. On retiendra entre autres les augmentations de prix de 12.9% pour le café torréfié, de 16.4% pour la margarine et de 38.4% pour le thé.



L'évolution des prix dans certaines industries du groupe principal des aliments et boissons a cependant exercé un effet modérateur sur l'indice du groupe. En particulier, l'indice des fabricants d'aliments pour animaux enregistrait une baisse de 7.9% en 1984 contre une hausse de 17.1% en 1983. On notera également la diminution de 14.1% de l'indice des fabricants de sucre de cane et de betterave, découlant en majeure partie de la baisse des prix du sucre rafiné.

With regard to the other sheltered groups, six recorded moderate gains and seven posted slight declines in 1984 compared with 1983. Of particular note were the upturn in the annual rate of increase for the textile group and the declines for the knitting mills and chemical and chemical products groups.

Soulignons enfin que parmi les autres secteurs abrités de l'industrie manufacturière canadienne, six groupes principaux ont enregistré en 1984 des hausses modérées tandis que sept affichaient de légères baisses comparativement à 1983. On retiendra en particulier la hausse par rapport à 1983 des taux de variation annuels pour le groupe principal du textile et les baisses pour les groupes principaux de la bonnetterie et de l'industrie chimique.

Percentage Change in the Industry Selling Price Index: Manufacturing

Variation en pourcentage de l'indice des prix de vente dans l'industrie: industries manufacturières

REVIEW OF RAW MATERIALS PRICE INDEX CHANGES IN 1984

Between December 1983 and December 1984, the Raw Materials Price Index rose 4.5%, compared to increases of 5.2% in 1983 and 8.3% in 1982. Aided by the moderating influence of a virtually unchanged coal, crude oil, and natural gas component index, the year-to-year movement in the Raw Materials Price Index between March and October displayed a downward trend, reaching a low of 0.7% for the period October 1983 to October 1984. However, in November, a significant rise in the coal, crude oil and natural gas component mainly caused the Raw Materials Price Index to increase to a level that was 5.2% higher than in November 1983.

On the other hand, the Raw Materials Price Index component excluding coal, crude oil and natural gas stood 1.4% higher in December 1984 than a year earlier. Over the early part of 1984, the index had risen quickly so that by March 1984, a 10.4% increase over March 1983 had been recorded. However, after March 1984, the index began to decline steadily, which in conjunction with the relatively stable index levels of the second half of 1983, yielded progressively lower annual rates of increase throughout the rest of 1984.

Of the eight component indexes, four largely determined the course of the Raw Materials Price Index in 1984: vegetable products, animal and animal products, non-ferrous metals, and coal, crude oil and natural gas. The behaviour of these individual component groups varied. After rising to a peak in March, the index for the vegetable products component fell without interruption to the end of the year. The non-ferrous metals component index also followed a similar pattern. The animal and animal products index climbed upwards until March at which point it basically leveled off to finish the year moderately higher than when it had started. The November increase in the coal, crude oil and natural gas component was the only significant change in this index during 1984.

Note: All data incorporated revisions as of December 1984. All indexes or percentage changes are subject to a revision policy of six months.

Unless otherwise stated, any reference to yearly movement refers to the index change between December 1983 and December 1984.

REVUE DES VARIATIONS DE L'INDICE DES PRIX DES MATIÈRES BRUTES EN 1984

Entre décembre 1983 et décembre 1984, l'indice des prix des matières premières a augmenté de 4.5%, contre 5.2% en 1983 et 8.3% en 1982. Étant donné l'influence modératrice de la composante du charbon, du pétrole brut et du gaz naturel, qui est restée pratiquement inchangée, les taux de variation annuels de l'indice des prix des matières brutes se sont constamment repliés entre mars et octobre, atteignant un creux de 0.7% pour la période allant d'octobre 1983 à octobre 1984. Mais en novembre, l'indice des prix des matières brutes s'inscrivait en hausse de 5.2% par rapport à novembre 1983 suite au fort accroissement enregistré pour la composante du charbon, du pétrole brut et du gaz naturel.

D'autre part, l'indice sans le charbon, le pétrole brut et le gaz naturel en décembre 1984 dépassait de 1.4% son niveau de l'année précédente. Au début de 1984, l'indice avait progressé rapidement de sorte qu'en mars 1984, on a enregistré une augmentation de 10.4% par rapport à mars 1983. Mais après mars 1984, l'indice a commencé à décroître de façon continue, ce qui, avec la stabilité relative au cours du second semestre de 1983, a entraîné des taux d'accroissement annuels progressivement plus faibles pendant le reste de 1984.

Sur les huit composantes, quatre ont exercé une influence significative sur l'indice des prix des matières brutes en 1984: substances végétales, animaux et substances animales, métaux non ferreux, et charbon, pétrole brute et gaz naturel. Ces composantes se sont comportées différemment. L'indice des substance végétales, qui a atteint son sommet en mars, n'a cessé de diminuer jusqu'à la fin de l'année. L'indice des métaux non ferreux a suivi la même tendance. L'indice des animaux et des substances animales a progressé jusqu'en mars et s'est ensuite stabilisé pour finir l'année à des niveaux légèrement plus élevés que ceux enregistrés au début de l'année. L'augmentation observée en novembre de la composante du charbon, du pétrole brut et du gaz naturel constitua le seul changement appréciable de cet indice au cours de 1984.

Nota: Toutes les données incorporent les révisions apportées jusqu'en décembre 1984. Tous les indices et toutes les variations en pourcentage peuvent faire l'objet d'une révision pendant six mois.

Sauf indications contraires, le mouvement annuel correspond à la variation des prix pour la période allant de décembre 1983 à décembre 1984.

Vegetable Products

The index for this component decreased by 6.7% in 1984, following an increase of 24.0% in 1983. Lower raw sugar prices contributed the most to the 1984 decline with additional contributions provided by lower prices for fresh vegetables and oilseeds.

Raw sugar prices had the largest change, finishing the year 40.3% lower in the face of high world sugar inventories, which in August 1984 stood at 38.0 million tons, down slightly from the record level of 42.9 million tons in August 1983. Fresh vegetable prices, rising sharply to a peak in March mostly as a result of frost induced shortages in Mexico and the Southern United States, fell back quickly over the remainder of the year to register a drop of 15.2% by the end of 1984. Oilseed prices followed a similar path, declining substantially over the second half of the year to record a drop of 12.8% during 1984.

Animal and Animal Products

Between December 1983 and December 1984, the index for this component increased 7.3% across a broad range of commodities. The largest contributing factor to this increase was a 7.9% increase in cattle and calf prices. Higher prices for hogs, up 14.7%, and milk, up 5.8%, also had a significant impact on this component index.

The 7.9% rise in cattle and calf prices occurred mainly in the first quarter of 1984. Concomitantly, Canadian cattle slaughterings had dropped approximately 8.4%, compared to the first quarter in 1983. Hog prices followed an up and down pattern in 1984 with swings as wide as 10% registered in some months. The 5.8% rise in milk prices resulted from upward adjustments in the Target Returns rate, and in fluid milk prices administered by provincial milk marketing boards.

Non-ferrous Metals

The non-ferrous metal index fell 12.4% during 1984, in contrast with 1983 when it rose 11.5%. Six metals in this index posted mostly substantial price decrease but these were partially offset by modest price increases in four other metals. Major contributors to the 12.4% annual decrease were prices for non-ferrous scrap, down 12.5%, and precious metals, down by an average 14%. Copper prices were marginally lower, down 3.1%, as were zinc prices, down 1.5%.

Substances végétales

L'indice de cette composante enregistra une baisse de 6.7% en 1984, après une hausse de 24.0% en 1983. Les diminutions du prix du sucre brut et, dans une moindre mesure, le fléchissement des prix des légumes frais et des graines oléagineuses ont le plus contribué à la baisse de l'indice de cette composante en 1984.

Le prix du sucre brut a le plus varié, terminant l'année avec une chute de 40.3% à cause de l'important stock de sucre dans le monde, qui s'établissait à 38.0 millions de tonnes en août 1984, soit une légère baisse par rapport au niveau record de 42.9 millions en août 1983. Les prix des légumes frais, qui ont monté en flèche pour atteindre un sommet en mars, essentiellement à cause des pénuries dues au gel au Mexique et dans le sud des États-Unis, se sont rapidement repliés pendant le reste de l'année pour enregistrer une perte de 15.2% à la fin de 1984. Le prix des graines oléagineuses a suivi la même tendance, accusant une forte chute au cours du second trimestre pour enregistrer un repli de 12.8% au cours de 1984.

Animaux et substances animales

Entre décembre 1983 et décembre 1984, l'indice de cette composante a augmenté de 7.3% dans une vaste gamme de produits. Le facteur qui a le plus contribué à cette hausse a été la montée de 7.9% du prix des veaux et bovins. L'accroissement du prix des porcs (+14.7%) et du lait (+5.8%) a également exercé une influence significative sur l'indice de cette composante.

L'augmentation de 7.9% des prix des veaux et bovins s'est surtout faite sentir au cours du premier trimestre de 1984, alors que l'abattage au Canada enregistrait une baisse d'environ 8.4% par rapport au premier trimestre de 1983. Les prix des porcs ont enregistré des hausses et des baisses en 1984, la variation pouvant atteindre 10% certains mois. L'augmentation de 5.8% des prix du lait a essentiellement résulté des rajustements à la hausse des taux de rendement cible et des augmentations des prix du lait de consommation régis par les offices provinciaux de commercialisation du lait.

Métaux non ferreux

L'indice des métaux non ferreux a baissé de 12.4% au cours de 1984 alors qu'il augmentait de 11.5% en 1983. Six métaux de cette composante ont subit de fortes réductions, contrebalancées en partie par la faible montée des prix de quatre autres métaux. Les éléments qui ont le plus contribué à la baisse annuelle de 12.4% furent les déchets non ferreux (-12.5%) et les métaux précieux (-14% en moyenne). Les prix du cuivre et du zinc ont légèrement baissé (-3.1% et -1.5% respectivement).

Coal, Crude Oil and Natural Gas

This component index increased 7.0% in 1984, compared to increases of 3.6% in 1983 and 16.4% in 1982. Nearly all of this increase occurred in November when crude oil prices rose by 8.0% as a result of the $2.78 per barrel increase in the Petroleum Compensation Charge.

Charbon, pétrole brut et gaz naturel

L'indice de cette composante s'est accru de 7.0% en 1984, comparativement à des augmentations de 3.6% en 1983 et de 16.4% en 1982. Presque toute cette hausse s'est produite en novembre, lorsque le prix du pétrole brut a augmenté de 8.0% à la suite d'une majoration de $2.78 des frais d'indemnisation pétrolière.

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Gross weighted, including inter-industry shipments. Explanation of methods follows Table 4. — Indice pondéré brut comprenant les livraisons inter-industrielles. L'explication des méthodes est donnée à la suite du tableau 4.

(2) The Petroleum Refineries index (D544001 18-3651) is estimated for the current month. The movement of this index is reflected in Major Group 18 and also in the Industry Selling Price total for Manufacturing. — L'indice des raffineries de pétrole (D544001 18-3651) pour le mois courant a été estimé. Le mouvement de cet indice influe sur le groupe 18 de même que sur l'indice total des prix de vente dans l'industrie manufacturière.

(3) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

Note: Indexes for the most recent six months shown are subject to revision.
Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.
(1) Thermal Coal Index for the most recent twelve months is subject to revision. The index for coal is a purchase price index determined by surveying electric utilities. - L'indice du charbon thermique pour les 12 mois les plus récents est sujet à révision. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité.

TABLE 3. Electric Power Selling Price Indexes (Non-residential)(1)

TABLEAU 3. Indices des prix de vente de l'énergie électrique (non-résidentielle)(1)

(1) Monthly prices are collected and processed three times per annum. The indexes of prior year have a twelve months revision period during the current year. — Des prix mensuels sont relevés et calculés trois fois par année. Les indices de l'année antérieure sont sujets à révision pendant les douze mois de l'année courante.

TABLE 4. Raw Materials Price Index

TABLEAU 4. Indice des prix des matières brutes

1977 = 100

Note: Indexes subject to revision.
Nota: L'indice est susceptible d'être révisé.
(1) Revised from January 1979 to October 1980 to include costs associated with the Syncrude Levy and pipeline transportation charges on crude oil. — Indice révisé de janvier 1979 à octobre 1980 pour tenir compte du renchérissement du pétrole brut provoqué par la contribution Syncrude et les frais du transport par pipe-line.
(2) Previously this group was called "Fuels". — Ce groupe s'appelait auparavant "Combustibles".

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971 = 100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: *Industry Selling Price Indexes: Manufacturing, 1956-1976,* Catalogue 62-543 for the 1971 = 100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices by oil companies for finely specified categories of sale.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user cate-

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueille des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: *Industries manufacturières, 1956-1976,* n° 62-543 au catalogue pour les indices basés sur l'année repère 1971 = 100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la

gory in the Petroleum Refinery Index PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P^{Pub.}_{t/71} = P^{New}_{t/Jan.\ 77} \times P^{Old}_{Jan.\ 77/71}$$

where

$P^{Pub}_{t/71}$ is the published index for a period subsequent to January 1977 which has been dervied from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P^{New}_{t/Jan.\ 77}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P^{Old}_{Jan.\ 77/71}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P^{publ.}_{t/71} = P^{nouv.}_{t/janv.\ 77} \times P^{anc.}_{janv.\ 77/71}$$

où

$P^{publ.}_{t/71}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation de prix mesurée à partir du nouvel échantillon;

$P^{nouv.}_{t/janv.\ 77}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P^{anc.}_{janv.\ 77/71}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Steel Foundry Input Index (1971 = 100)

Input price indexes for Steel Foundries (SIC 2910) are calculated using prices covering approximately 80% of total material inputs to the industry. The index for foundry inputs is determined using purchase prices gathered from establishments currently classified to the Iron and Steel Mills industry. These prices are inclusive of all costs incurred by the purchaser to bring the goods to his factory gate (freight, taxes). The weights in this index are derived from 1974 purchases as supplied by the Steel Castings Institute of Canada.

The Steel Foundry Input Index is calculated using the same formula as is described in the description of the Thermal Coal Index. Indexes are available from 1974 onwards, weights are available on request.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971-100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des entrées dans les fonderies d'acier (1971 = 100)

L'indice des prix des entrées dans les fonderies d'acier (CAÉ 2910) est calculé à l'aide des prix d'environ 80% des entrées de matières dans cette industrie. Cet indice est établi à partir des prix d'achat déclarés par les établissements classés à l'industrie des fonderies d'acier. Ces prix comprennent toutes les dépenses engagées par l'acheteur pour faire parvenir les produits à la porte de son usine (frais de transport, taxes, etc). Les coefficients de pondération de cet indice sont calculés à partir des achats pour 1974 fournis par le **Steel Castings Institute of Canada.**

L'indice des prix des entrées dans les fonderies d'acier est établi à l'aide de la même équation que l'indice du prix d'achat du charbon thermique. L'indice remonte jusqu'en 1974; les coefficients de pondération sont disponibles sur demande.

Thermal Coal Purchase Price Index (1971 = 100)

This index on a 1971 = 100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, including federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspayres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

$\sum$ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the weight of each particular item in the base year o. Two sets of weights are used. The first set comprises 1971 quantities from 1971 to 1980 inclusive. The second set comprises 1980 quantities starting in January 1981. A link factor has been calculated in December 1980.

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Indice du prix d'achat du charbon thermique (1971 = 100)

Cet indice de base 1971 = 100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, avec les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspayres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

$\sum$ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération de chaque article particulier pendant l'année de base o. Deux ensembles de coefficients de pondération sont utilisés. Le premier ensemble comprend les quantités de 1971 pour les années de 1971 à 1980 inclusivement. Le second ensemble comprend les quantités de 1980 à partir de janvier 1981. Un facteur de liaison a été calculé en décembre 1980.

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971-100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) and index for bills less than 5 000kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$Pt/_o$ = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence (n^o 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971-100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie, garantie, non susceptible d'être interrrompue fait l'objet du relevé les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité de produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

$Pt/_o$ = indice pour l'année t

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année o, année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5,000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5,000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW and over 20,000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5,000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15,000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Méthodologie

Factures de moins de 5,000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5,000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquêté) pour chaque intervalle ou strate, par ex., 5,000-8,000 kW, 8,001-10,000 kW, 10,001-15,000 kW, 15,001-20,000 kW et plus de 20,000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5,000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinement que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15,000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977 = 100)

The Raw Materials Price Index measures the price change in the purchase of raw materials by Canadian Industry. By the term raw materials is meant those commodities that are the products of the primary stage of production - for example wheat, but not flour, iron ore but not pig iron; and coal but not electricity. Approximately seventy commodities are priced in the index, grouped into eight major components.

The index and the major group indexes, on a 1977 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2892.

The index covers purchases by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers price index, prices should include all charges a purchaser incurs to bring the commodity to his establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. Imports as well as domestically produced goods are included. For example, the pricing of crude oil includes pipe line charges, and levies such as the Petroleum Compensation Charge, but the purchase price of imported oil also reflects the import subsidy paid to purchasers.

In this index it is not always practicable to collect the price changes on all the charges the purchaser incurs. Prices are ideally collected from the purchaser. However, in several cases where there is a conventional pricing point already well known for a commodity that price is used; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing (e.g. some non-ferrous metals). A detailed description of the characteristics of prices for any commodity is available from Prices Division on request. Prices sought for each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1976 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These values have been adjusted for price changes between 1976 and 1977.

Indice des prix des matières brutes (1977 = 100)

L'indice des prix des matières brutes mesure la variation des prix des matières brutes qu'achètent les industries canadiennes. Par matières brutes, on entend les marchandises qui sont le fruit de l'étape primaire de la production. Cela englobe, par exemple, le blé (mais non la farine), le minerai de fer (mais non la fonte en gueuses) et le charbon (mais non l'électricité). Les prix d'environ soixante-dix produits, regroupés en huit grandes composantes, sont relevés aux fins de l'indice.

L'indice d'ensemble et ceux des composantes, dont l'année de base est 1977, paraissent tous les mois dans le Quotidien de Statistique Canada, à peu près cinq semaines après la fin du mois de référence. Ils sont offerts simultanément dans la matrice 2892 de CANSIM.

L'indice vise les achats des industries canadiennes, habituellement en vue d'une transformation additionnelle, mais il ne porte pas sur les exportations, ni sur les matières brutes qui passent directement à la demande finale (principalement des denrées alimentaires). Par exemple, les pommes de terre achetées par les entreprises de conditionnement des aliments pour la fabrication de croustilles ou de frites congelées sont prises en compte dans l'indice, mais celles achetées directement par le consommateur ne le sont pas.

Comme il s'agit d'un indice des prix à l'achat, les prix devraient comprendre toutes les dépenses engagées par l'acheteur pour faire parvenir le produit à la porte de son établissement. Ils englobent donc les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur. On tient compte des importations et des biens produits au pays. À titre d'exemple, les prix du pétrole brut comprennent les frais de pipe-line et les impôts comme la taxe d'indemnisation pétrolière, mais le prix d'achat du pétrole importé traduit également la subvention à l'importation versée aux acheteurs.

Il n'est pas toujours possible de relever les variations de toutes les dépenses engagées par l'acheteur, auprès duquel les prix sont idéalement recueillis. Il peut néanmoins exister des points de relevé bien connus pour un produit donné (offices de commercialisation des oeufs et du lait, parcs à bestiaux, etc.); on préférera dans ces cas recourir aux prix donnés par ces intermédiaires. Lorsqu'il est impossible d'obtenir les renseignements pour une matière non transformée, les prix sont prélevés pour un produit semblable à l'étape suivante de la transformation (c'est le cas notamment de certains métaux non ferreux). La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donnée. Les prix recueillis chaque mois sont ceux pratiqués le 15 du mois ou le dernier jour ouvrable qui le précède. Dans certains cas, les prix utilisés représentent la moyenne de la semaine qui englobe le 15. Les prix qui ne sont pas déclarés directement à Statistique Canada sont tirés de revues spécialisées ou des publications d'autres ministères.

Les pondérations sont fondées sur les tableaux des entrées-sorties de 1976, qui donnent les valeurs (prix d'achat) des produits acquis à titre d'entrées intermédiaires. Les valeurs en cause ont été modifiées en fonction de la variation des prix entre 1976 et 1977.

The index is calculated according to the following formula:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

where

I_s = commodity index

P_t = current level of price quote

P_{77} = average level of price quote in 1977

n = number of price quotes for the commodity

I = major group or total index

P_{77}/P_{76} = price movement form 1976 to 1977 of commodity

V_{76} = expenditure in 1976 on commodity.

Individual price quotations are equally weighted within the commodity indexes except in a few instances where data are available to allow prices to be weighted according to their market shares.

L'indice est calculé selon la formule suivante:

$$I_s = \frac{1}{n} \sum P_t / P_{77} \times 100$$

$$I = \frac{\sum I_s \left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}{\left(\frac{P_{77}}{P_{76}} \cdot v_{76}\right)}$$

où

I_s = l'indice du produit

P_t = le prix actuel du produit, d'après le relevé

P_{77} = le prix moyen du produit en 1977

n = le nombre de relevés effectués pour le produit

I = le groupe ou l'indice d'ensemble

P_{77}/P_{76} = la variation des prix du produit de 1976 à 1977

V_{76} = les dépenses consacrées au produit en 1976.

En ce qui concerne les indices des produits, les observations individuelles des prix ont toutes la même pondération, sauf lorsque des données connexes permettent de pondérer les prix en fonction des parts du marché.

Index weights for the major groups and their commodity content are presented in the following table:

Le tableau qui suit renferme les pondérations relatives aux groupes et aux produits qui les composent:

Total major groupes Ensemble des groupes	Weights 100% Pondération 100%	Commodities within each group Produits dans chaque groupe
Vegetable products - substances végétales	12	Fresh fruit, wheat, other grains, oil seeds, rubber, cocoa, coffee, tea, fresh vegetables, tobacco, hay - Fruits frais, blé, autres céréales, oléagineux, caoutchouc, cacao, café, thé, légumes frais, tabac, foin
Animals, and animal products - Animaux et substances animales	23	Furs, hides and skins, cattle and calves, sheep And lambs, hogs, poultry, milk, eggs, fish - Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile - Matière textiles	1	Cotton, wool, man-made fibre - Coton, laine, fibres synthétiques
Wood - Bois	11	Logs, pulpwood - billes, bois à pâte
Ferrous materials - Matières ferreuses	3	Scrap, iron ore - Ferraille, minerai de fer
Non-ferrous metals - Métaux non ferreux	6	Aluminum, copper, lead, nickel, gold, other precious metals, tin, zinc, scrap, other - Aluminium, cuivre, plomb, nickel, or, autres métaux précieux, étain, zinc, déchets, autres
Non-metallic minerals - Minéraux non métalliques	4	Sulphur, sand and gravel, asbestos, stone, gypsum, potash - Soufre, sable et gravier, amiante, pierre, gypse, potasse
Coal, crude oil, natural gas - Charbon, pétrole brut, gaz naturel	40	Thermal coal, crude oil, natural gas - Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 990-9611

Les utilisateurs qui auraient des observations à faire au sujet de ces indices sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 990-9611.
